

Introducing NetBeans IDE

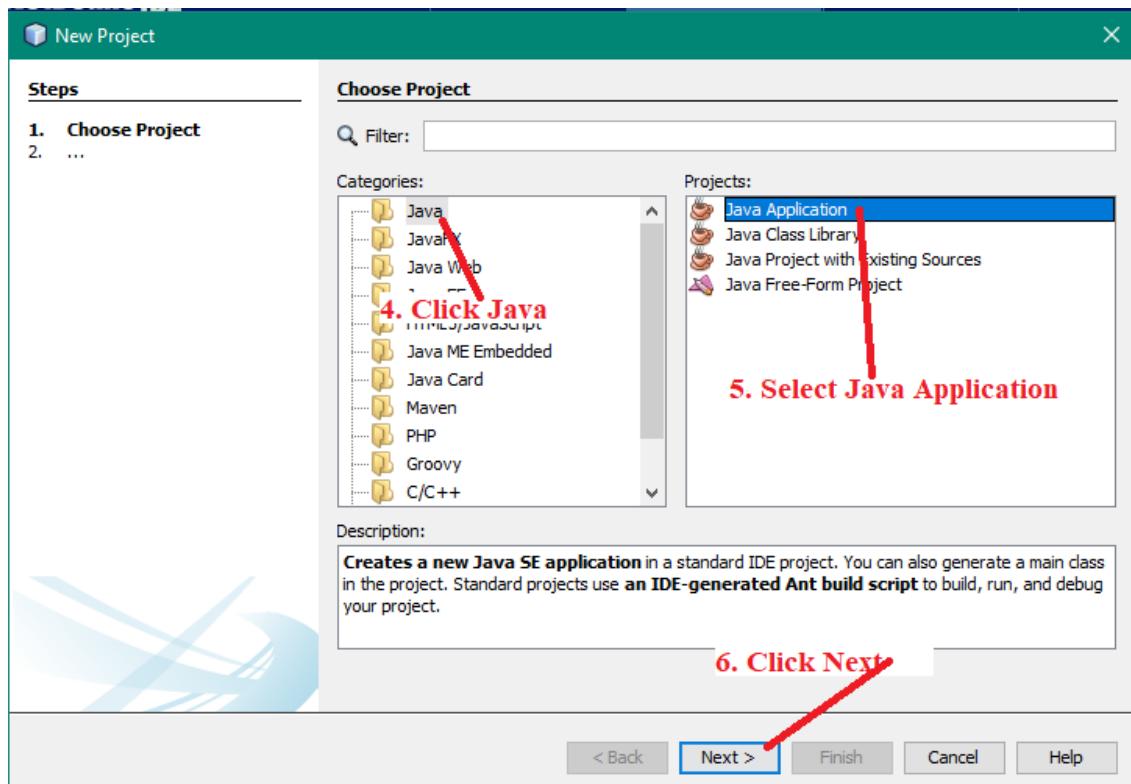

1. Search netbeans in the start menu
2. Open netbeans

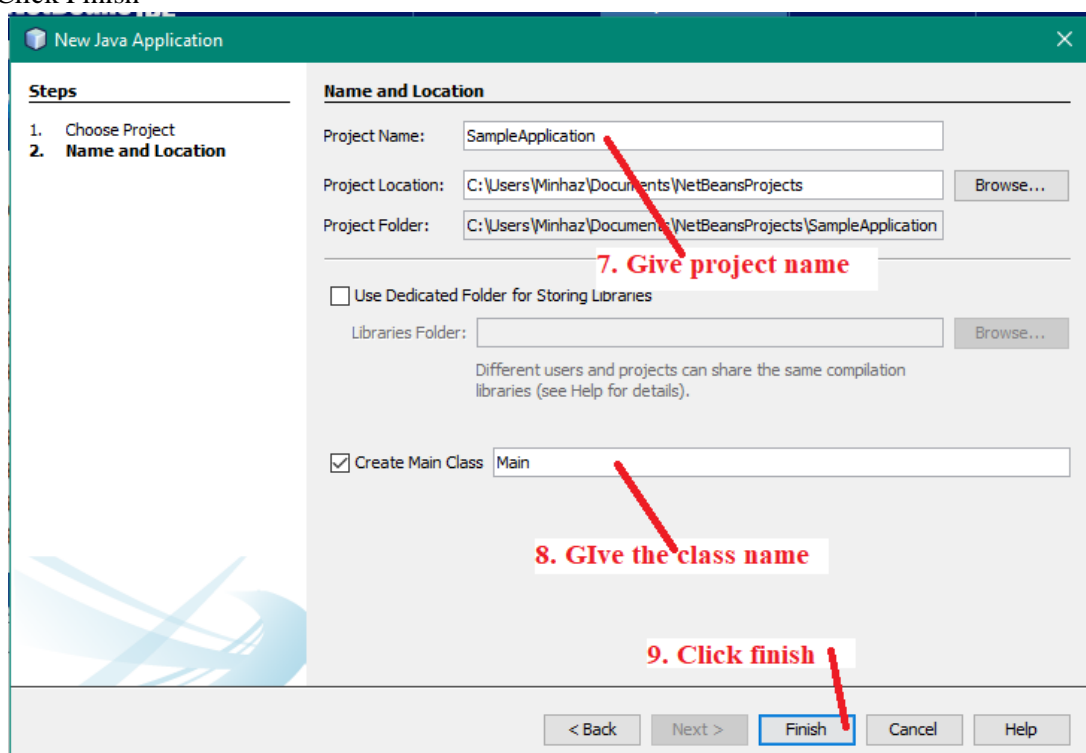

3. After netbeans open, click File then click New Project, or use shortcut Ctrl+Shift+N

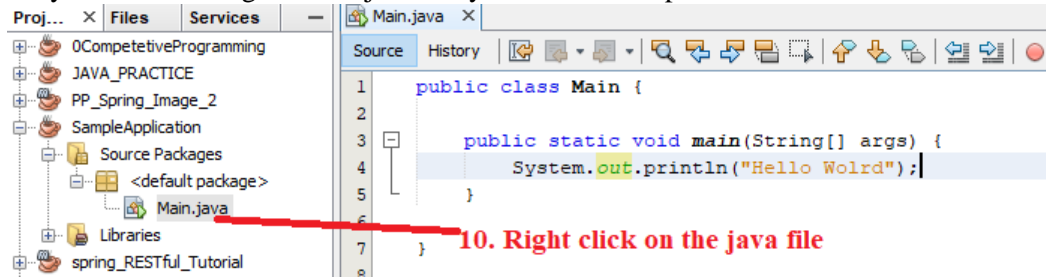

4. Select Java in the categories
5. Then select Java Application from the Projects menu
6. Click next

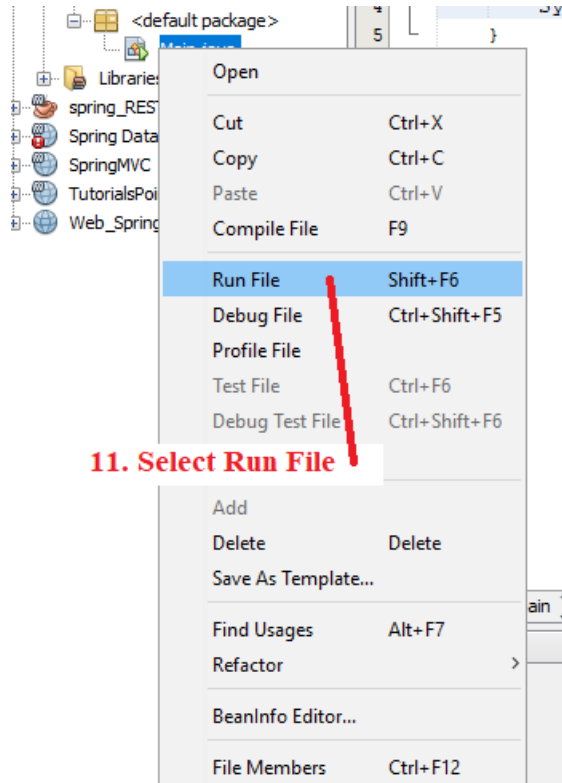

7. Give the project a name.
8. Give the main class a name, any name you want.
9. Click Finish

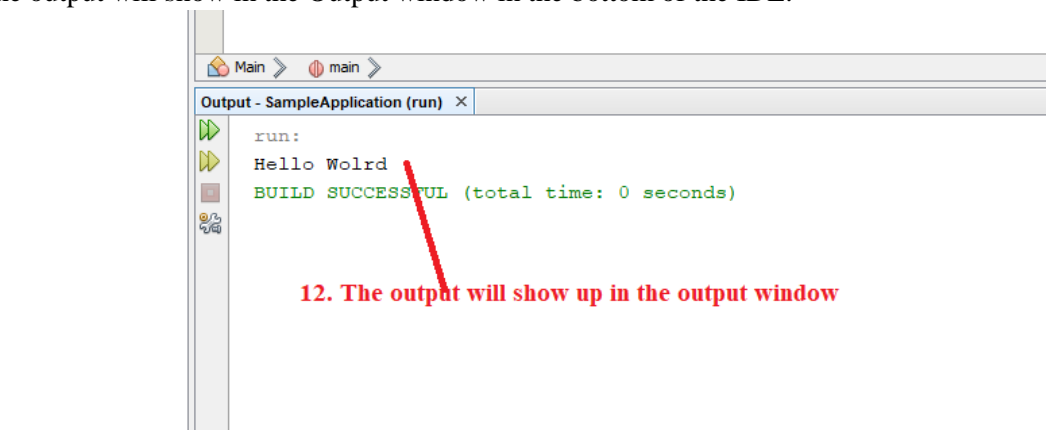

10. Write your code and right on the java file you want to compile

11. Select Run File or use shortcut “Shift + F6”

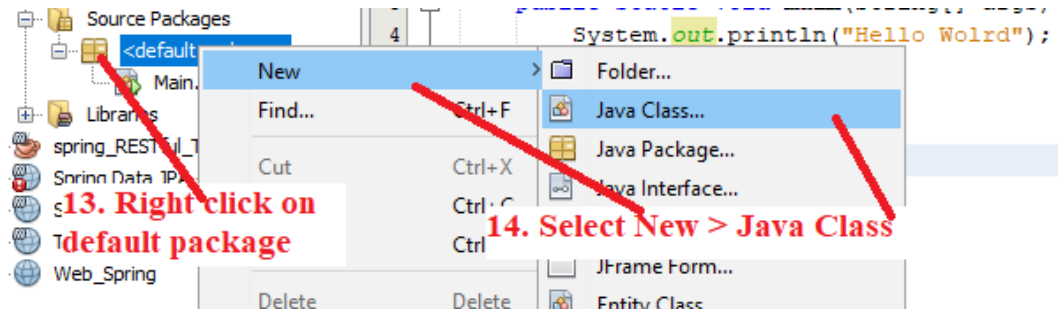

12. The output will show in the Output window in the bottom of the IDE.

- If the output window isn't there, click Window > Output

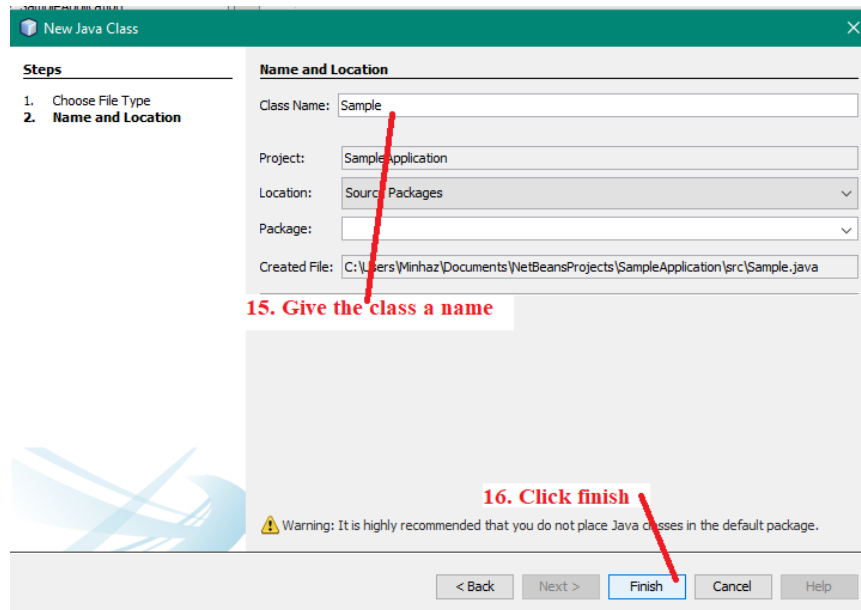

13. To create a new file, right click on the Default Package under your Project

14. Select New > Java Class

15. Give the class a name.

16. Click Finish

17. Write your code with the main function, right click on the java file that you want to run, select run file
